FOR IMMEDIATE RELEASE

LifePoint Informatics to Unveil LifePoint Mobile: Lab Results Access Anytime, Anywhere

Glen Rock, NJ, March 2, 2010 LifePoint Informatics announced the upcoming release of LifePoint Mobile, the ultra-thin client solution that enables users to gain access to lab results on hand-held devices such as Blackberry, iPhone, and other PDAs. Lab results will be readily available 24/7 just like email. The release is scheduled for early April 2010.

LifePoint Mobile's key features include inbox presentation of lab results, AP reports, radiology reports, and clinical messages. It boasts enhanced notification options, options to email or SMS alerts, stat, critical, and new results. Abnormal results are highlighted for easy identification.

LifePoint Mobile offers secure log-in and dynamic inbox for filter results. It also allows for ad-hoc patient queries and provides all information for physicians to contact patients directly.

The results delivery methods are varied. Users can email link to result, SMS link to result or log-in through browser. "In the world of Blackberries and iPhones, LifePoint Mobile makes our products just as accessible," states CTO, Preston Law. "We anticipate our clients will value having lab results anytime, anywhere."

About LifePoint Informatics:

LifePoint Informatics offers a complete suite of on-line order entry/results reporting tools and EMR interfacing connectivity systems. The repository hosts a multitude of reports for different systems including laboratory, microbiology, pathology, blood bank, transcription, and radiology.
